

Street Tree MCKOWNVILLE STREET TREE PLANTING PROGRAM

Beautify McKownville—

And improve your property! Order a tree for the street right-of-way next to your house for planting in early April to late May 2004. If you wish, we'll even plant it for you. All trees are bare root, at least 1.5 inches in caliper (trunk diameter), and approximately 5-7 feet tall.

Your Responsibilities

You Call Before We Dig. Call: Dig Safely New York at 1-800-962-7962. DSNY have all underground lines delineated so we'll know where *not* to dig. All tough roots from a former tree must be removed before planting.

Watering

Newly planted trees require approximately 1 inch of water per week. It is essential that you provide the water when rainfall is insufficient. In dry spells, deep water 2-3 times a week with a hose on slow trickle.

Select the appropriate tree

If your tree is to be planted beneath utility lines, please select a tree that will be suitable for that location. See tree descriptions below.

Bare root trees are less expensive, lighter, and easier to plant than balled-and-burlapped or container grown trees, and they adapt more readily to their new sites.

A reputable nursery will supply the trees; however, we cannot guarantee the success of the plantings, or reimburse you if your tree dies.

Orders for planting during the spring of 2004 must be received by March 15th.

Trees will be delivered in late April. Or, look for information on our offering for fall planting. Mail your check to:

McKownville Improvement Association
