

To Directors and Officers  
McKownville Improvement Association

Please vote at the Fire House next Tuesday night, June 15.

Our present Fire House is not adequate; the floor structure will not support the heavy trucks now in use and there has been some criticism by the New York State Board of Fire Underwriters.

Fred Abele, Frank Casatelli, Bob Perry and other members of the McKownville Fire Department have been working on this problem for several years. The proposed building is needed if the community is to receive adequate fire protection and continue to qualify for low fire insurance rates. I believe residents of McKownville and owners of commercial property here should support this proposal because it is necessary and will benefit this community. And, more important, in recognition of the many hours that the volunteer firemen have spent in training, servicing equipment, arranging for mutual aid, and in other service to this community.
