Subject: Coordination for Residential Storm Water Connection Point (Sump Pump Connection)

Dear Resident,

Delaware Engineering, D.P.C. and the Town of Guilderland would first like to thank you for your patience during the construction phase of the Storm Water Project taking place in your area. In an effort to avoid work schedule conflicts and homeowner vacancies during construction hours, and to ensure all residents have the most efficient and effective results, we are asking that you coordinate with your contracted plumber and/or excavator to find the best location for the storm water (Sump Pump) connection to your home.

Alternately, Delaware Engineering, D.P.C. will assist in locating a connection site, but please keep in mind that contracted plumbers and excavators often have cost effective and time efficient methods of installation that can translate to savings for residents. Coordination's with contractors may prove to be better options.

In order to keep progress moving swiftly, and to keep costs to the residents as low as possible, within the next two weeks, it is asked that you coordinate with your contracted plumber, excavator, or Delaware Engineering to locate a connection point at the front of your home just behind your sidewalk on the house side. Delaware Engineering and the Town of Guilderland has provided the attached stake for this purpose. Please use the attached stake to mark your preferred lateral connection area.

Don't hesitate to contact our office with any questions, concerns, or comments and we will do our best to assist. The Delaware Engineering office number is (518) 452-1290.

Thank you,

Dale Nunamann
